EXECUTIVE SUMMARY

The purpose of the Latinx Data Report is to understand Greater Grand Rapids’ Latinx residents’ perceptions and experiences on a variety of topics through analysis of survey data from VoiceGR 2016 and VoiceKent 2017. There is specific interest in not only understanding the responses to these surveys by residents who identify as Latinx, but also how their responses compare to those of residents who identify as another race or ethnicity.

The VoiceGR and VoiceKent surveys gathered information on topics such as housing, education, health, and food accessibility from residents in the greater Grand Rapids area and Kent County, respectively. The surveys were administered by researchers at the Dorothy A. Johnson Center for Philanthropy’s Community Research Institute (CRI) at Grand Valley State University. Responses from 4,641 VoiceGR 2016 surveys and 4,704 VoiceKent 2017 surveys were used for analysis.

Key Findings

- In 2016 and 2017, Latinx respondents had the lowest levels of educational attainment of all racial/ethnic groups.
- In 2017, Latinx respondents were about equally as likely as other racial/ethnic groups to have full-time and part-time jobs, yet were more than twice as likely not to have health insurance.
- Latinx respondents were less likely than White respondents to report they could meet their basic needs “very well” based on their current income. In 2017, Latinx respondents were the least likely of all racial/ethnic groups to say their families have access to enough fruits and vegetables based on their current income.
- Two-thirds of Latinx respondents rated their mental and emotional health as “excellent” or “good” — the same rate as White respondents. However, Latinx respondents were more than twice as likely as White respondents to say they could not recognize signs and symptoms of a mental health condition in themselves or others.
- In both 2016 and 2017, Latinx respondents were the least likely of all racial/ethnic groups, and only half as likely as White respondents, to say they felt “very safe” in their neighborhoods/communities. Latinx respondents who were near or below twice the federal poverty level were twice as likely as other Latinx respondents to say they feel “very unsafe” or “somewhat unsafe” in their neighborhoods.
- Themes emerged across responses to open-ended questions regarding a neighborhood’s biggest strengths and problems, including a sense of community vs. lack of community, tranquility vs. noisiness, cleanliness vs. lack of cleanliness, proximity to resources vs. distance from resources, feelings of safety and lack of crime/violence vs. feelings of insecurity and presence of crime/violence.

1 The term “Latinx” in this report refers to all respondents who selected the category “Hispanic or Latino/a” on VoiceKent 2017 or “Hispanic/Latino” on VoiceGR 2016 when asked about their race and/or ethnicity. The term African American refers to those who selected “Black/African American” on VoiceGR 2016 or “Black or African American” on VoiceKent 2017. The terms African American, Multiracial, and White refer to respondents who did not also select the option “Hispanic or Latino/a” when asked about their race and/or ethnicity.
INTRODUCTION

This report is based on data from the VoiceGR 2016 and VoiceKent 2017 surveys. These community surveys assess the perceptions and experiences of community members on a variety of topics related to inclusive growth. The results presented in this report disaggregate the data by race/ethnicity, specifically to help understand how the responses of Latinx members of the community compare to those of other groups. This project will also inform forthcoming work in the community related to inclusive growth, which will focus on access, opportunity, and the ability to prosper, including health, educational attainment, and access to jobs. The analysis contained in this report examines responses from VoiceGR and VoiceKent that speak directly to perceptions and experiences of the Latinx community as well as to questions of inclusive growth.

METHODOLOGY

Data Collection and Processing

VoiceGR 2016 and VoiceKent 2017 utilized a deliberate network-engagement strategy. By partnering with local organizations for survey collection, natural networks of communication were utilized to encourage residents to complete the survey, which was available in both English and Spanish. Paper surveys were collected at community events and at partner organizations’ locations. The survey was also available online and was distributed through a variety of nonprofit, community, and academic organizations’ email newsletters and social media. While VoiceGR focused on residents of greater Grand Rapids, VoiceKent 2017 expanded the survey to include residents throughout Kent County.

To obtain geographic information, the online survey asked respondents to click on the approximate location of their home on a map, and the paper version asked for the intersection nearest to their home. From that information, respondents were assigned to larger geographic areas, such as ZIP codes and neighborhoods, for analysis.

Incentives were offered for participation. VoiceKent respondents were entered into a drawing for one of three prizes, which were donated by Amway Grand Plaza, JW Marriott Grand Rapids, and the Grand Rapids Griffins. VoiceGR respondents were entered into a drawing for one of four prizes, which were donated by Amway Grand Plaza, Grand Rapids Public Museum, Hyatt Place Grand Rapids South, and JW Marriott Grand Rapids. Small incentives such as snacks and bus passes were offered at in-person surveying events.

Quantitative Analysis

Data Cleaning

Prior to beginning this project, researchers employed typical data cleaning measures, and removed nonsensical answers and assigned each person to one race/ethnicity category. Each respondent who selected Hispanic or Latino/a in addition to a race/ethnicity category was recorded as “Hispanic or Latino/a.” Respondents who checked more than one race were assigned to the Multiracial category, and anyone who checked only one race was assigned to that category. In this report, then, the categories “African American,” “Multiracial,” and “White” exclude Hispanic/Latinx individuals.

1 A full list of community partners can be found at https://johnsoncenter.org/services/community-research/voicekent/partners.
Descriptive Statistics
To explore the VoiceKent 2017 and VoiceGR 2016 data for this project, bar charts were created for each quantitative question (i.e., closed-ended), divided by each racial/ethnic group. These bar charts then provided a launching point for further analysis, such as cross tabulations between two or more questions, modeling attempts, and mapping. Variables included are those of particular interest for those studying and working in the field of inclusive growth, and for those interested in specific needs of the Latinx community in the area.

Classification
In order to understand the impact of race/ethnicity on specific outcomes more fully, logistic regression models were created. Race/ethnicity was used as an explanatory variable in models for income, ratings of safety, and ratings of physical and mental health. In each model, religious status, relationship status, age, gender, sexual orientation, and educational attainment were controlled for. Findings from these models are reported throughout the Findings section. For more information on the creation of these models, see Appendix M.

Additionally, logistic regression models and decision trees were created using data from Latinx respondents with other demographics, such as those listed above, used as explanatory variables. The intent of this was to understand where disparities may lie within Latinx respondents for the same outcome variables listed above. Neither the decision trees nor the logistic regression models were good predictors of mental health, physical health, income, or safety within Latinx respondents. This does not mean that there are not disparities among Latinx respondents, only that one cannot say the differences are statistically significant and related to particular demographic variables. This could be due to a true lack of relationship between demographic characteristics and outcomes within Latinx responses, missing data, or a small sample size, among other possibilities. Due to these inconclusive results, no findings from these models are discussed throughout the rest of the report.

Mapping
Quantitative data related to the area or neighborhood in which the respondent lived, and the percentage of Latinx respondents who fell into each theme for the qualitative questions were mapped by ZIP code. Only those ZIP codes with a sample size of ten or more were included, thus only ZIP codes in and around the City of Grand Rapids are shown on the maps. These maps are included in Appendices A–K. The number of Latinx respondents in each ZIP code is shown in Appendix L.

Qualitative Analysis
Researchers completed grounded-theory qualitative analysis on responses to two VoiceKent 2017 survey questions: “What do you think is the biggest strength of your neighborhood/community?” (n=238), and “What do you think is the biggest problem in your neighborhood/community?” (n=237). Researchers used NVivo, a qualitative data analysis package, to assign responses to codes. These codes were refined and grouped into categories called themes. These themes were refined, and some were divided into smaller sub-themes to represent the survey responses more precisely.
LIMITATIONS

As previously mentioned, the VoiceKent 2017 and VoiceGR 2016 surveys did not utilize a random sampling methodology. This means that researchers cannot establish with certainty that these respondents accurately represent the Kent County population as a whole. For example, about 40% of the respondents were male and 60% female, whereas ideally there would have been a 50/50 split between male and female respondents. Similar discrepancies exist for other demographic characteristics, such as race/ethnicity, income, and educational attainment. It must be emphasized that these data are not necessarily representative of the greater Grand Rapids area.

An additional limitation of the survey is that some of the terms used may be interpreted differently by different people. For example, when answering the question, “Based on your current income, how well can you afford to meet your basic needs (food, including water; shelter; utilities; and clothing)?” some may have interpreted “income” to include only the money they earn from employment, while others may include organizational or governmental assistance.

Qualitative analysis was also limited by researchers' difficulties interpreting some Spanish-language responses, likely due to spelling errors and researchers' lack of knowledge of colloquial terms.
**FINDINGS**

**Educational Attainment**

In 2016 and 2017, Latinx respondents had the lowest levels of educational attainment out of all racial/ethnic groups. On the whole, this group had attained graduate degrees, bachelor’s degrees, associate/technical degrees, or some college at the lowest rates, while having the highest percentage of persons without a high school diploma or with only a high school diploma or GED.

In 2017, one in four Latinx respondents did not have a high school diploma. Sixty percent did not have an education beyond a high school diploma or GED, compared to only 19% of White respondents. This means Latinx respondents were more than three times as likely as White respondents to not have attended at least some college courses.

**Figure 1: Educational Attainment by Race (2017)**

**Employment**

In 2017, Latinx respondents were about equally as likely as respondents of other racial/ethnic groups to have full-time and part-time jobs. Yet they were more than twice as likely to have no health insurance: 23% had no health insurance and 12% had health insurance for part of the year. In comparison, 5% of White respondents had no health insurance and 6% had health insurance for part of the year. Of Latinx respondents who worked full time, 17% said they did not have health insurance in the past year.

A strong relationship between education and employment was found for Latinx respondents as well as for respondents of each other racial/ethnic group. The percentage of Latinx respondents employed full time increases with each level of education: 27% of those who have less than or some high school were employed full-time, and 80% of

---

2 Unless otherwise specified, findings are from VoiceKent 2017 survey responses.
those with a graduate degree or higher were employed full-time. Additionally, no Latinx respondents with a bachelor’s degree or higher marked their employment status as “not currently working.”

While there was a strong link between education and household income for each racial/ethnic group, there were income disparities between races/ethnicities within the same education level. For example, 48% of Latinx respondents with a graduate degree or higher make less than $60,000 annually, but only 30% of White respondents with a graduate degree or higher make less than $60,000. African American and Multiracial populations also share similar income disparities within education levels.

---

This category does not include those who are unable to work, retired, or stay-at-home parents.
Food Access and Basic Needs

Consistent with African American and Multiracial respondents, Latinx respondents were less likely than White respondents to be able to meet their basic needs “very well” based on their current income. When analyzed by ZIP code, the percentage of Latinx respondents who said they are able to meet their basic needs “very well” ranged from 4% in 49504 to 44% in 49519. There were no ZIP codes where at least half of Latinx respondents said they could afford to meet their basic needs “very well.” To view these data on a map, see Appendix A.

Figure 3: Respondents’ Ability to Meet Basic Needs, by Race/Ethnicity (2016 & 2017)

“Based on your current income, how well can you afford to meet your basic needs (food, including water; shelter; utilities; and clothing)"

More than 1 in 10 Latinx respondents said their utilities had been turned off due to lack of payment in the past year. This was most likely to happen to those making $20,000 to less than $25,000. This differed from other major racial groups in that Latinx respondents with the lowest income (less than $5,000) were not the most likely to have their utilities turned off in the last year due to lack of payment.

Latinx respondents were the least likely of all racial/ethnic groups to say their families had access to enough fruits and vegetables.

Along with the rest of respondents, Latinx respondents saw a dramatic decline in perceived access to fruits and vegetables for their families and children (under age 18) from 2016 to 2017. In 2017, Latinx respondents were the least likely of respondents of all racial/ethnic groups to say their families have access to enough
fruits and vegetables — only 20% say they have sufficient access, compared to 54% of White respondents. This may be due to a true decrease in accessibility, or a different understanding of what it means to have access to enough fruits and vegetables. When examined by ZIP code, the percent of Latinx respondents who agree or strongly agree that their families have access to enough fruits and vegetables was as low as 14% in 49503 and only as high as 33% in 49519 and 49504. These data are displayed on a map in Appendix B.

Among all respondents, the higher the income, the more likely respondents were to say that their family has access to enough fruits and vegetables. Most Latinx respondents were more likely to disagree than agree with this question. Even still, among Latinx respondents, more than 40% of those in the highest income bracket said their families do not have access to enough of these foods.

When asked if they knew anyone or any place that could help with basic needs, 48% of Latinx respondents (the highest of any racial/ethnic group) said they did not. More than 70% of the Latinx respondents who said they could “not at all” meet their basic needs based on their current income also said they did not know anyone or any place that could help with basic needs.
Mental and Physical Health

In 2017, two-thirds of Latinx respondents said they would rate their mental and emotional health as either “excellent” or “good” — the same rate as White respondents. However, they were more than twice as likely as White respondents to say they could not recognize signs and symptoms of a mental health condition in themselves or others, at 29% and 13%, respectively.

One hundred percent of Latinx respondents who rated their mental health as “failing” said they could recognize signs and symptoms of mental health conditions in themselves or others. The same statistic was as low as 65% for Latinx respondents who rated their mental and emotional health as “good,” and 50% for those who were “not sure” how they would rate their mental and emotional health. Latinx respondents who said they cannot recognize signs of a mental health condition were more likely to rate their mental and emotional health as “excellent” or “good.”

Statistical modeling showed that after controlling for religious status, relationship status, age, gender, sexual orientation, and educational attainment, being Latinx instead of White had a statistically significant impact on ratings of mental health. The odds of rating one’s mental health as “Excellent” or “Good” were nearly 30% lower for Latinx respondents than White respondents.

Latinx respondents rated their physical health approximately the same as other respondents, with 65% rating their physical health as “excellent” or “good.”

</table>
There is a strong relationship between respondents’ rating of their physical and mental health. Of Latinx respondents who rated their physical health “excellent,” 59% rated their mental health the same, whereas only 5% of respondents who said their physical health was “poor” said their mental health was “excellent.” Furthermore, all Latinx respondents who said their physical health was “failing” rated their mental health as either “poor” or “failing.”

The top two barriers to getting both physical and mental health care for Latinx respondents were costs and not knowing who to contact. Latinx respondents were also three times as likely as other respondents to point to language as a barrier to receiving mental health care, as the doctor’s office/staff do not speak their language. Only 21% of Latinx respondents said there were no barriers to receiving physical health care, and only 15% said there were no barriers to receiving mental health care.

**Figure 6: Latinx Respondents’ Reported Barriers to Getting Mental Health Care (2017)**

“What do you feel are barriers to getting mental health care in your community?”

- Costs: 47%
- Didn’t know who to call: 35%
- Fear or mistrust of the mental health care system: 25%
- Language barrier: 15%
- Unable to leave work: 17%
- Unable to find child care: 15%
- Transportation: 18%
- Cultural beliefs about mental health: 18%
- Felt embarrassment or shame: 30%
- Location of health care or services: 15%
- Too much paperwork: 13%
- Other: 6%

15% of respondents reported no barriers.
Feeling Welcomed, Fitting In, and Racism

In both 2016 and 2017, Latinx respondents, along with African American and Multiracial respondents, were less likely than White respondents to say they “fit in” in their neighborhood/community. They said the same for downtown Grand Rapids, where they were less likely than White respondents to say they “fit in” or “feel welcomed.” When examined by ZIP code, as few as 53% (in 49507, 49509, and 49519) and as many as 87% (in 49548) of Latinx respondents said they felt like they fit in “completely” or “mostly” in their neighborhood/community. For a map of these data, see Appendix C.

Latinx respondents were slightly less likely than other racial/ethnic groups to see racism as an issue in their neighborhood, the Greater Grand Rapids Area, or the United States as a whole. This held true for both 2016 and 2017. As shown on the map in Appendix D, 50% of Latinx respondents in ZIP code 49519 said racism is “very much” or “somewhat” a problem in their neighborhood/community. Conversely, only 9% of Latinx respondents in ZIP code 49321 said the same.

However, there is a strong relationship for Latinx respondents, as well as other respondents, between how much they say they fit in, and to what extent they consider racism a problem in their neighborhood. Seventy-two percent of Latinx respondents who do not see racism as a problem at all in their neighborhood
also say they fit in “completely” or “mostly.” The numbers are reversed for those who see racism as “very much” a problem in their neighborhood — only 28% of such respondents say they fit in their neighborhood “completely” or “mostly.”

![Figure 8: Latinx Respondents’ Perception of Neighborhood Racism Compared to How Well They Feel They Fit into the Neighborhood (2017)](image)

Relatedly, lack of a sense of community emerged as a theme throughout the problems that Latinx respondents identified in their neighborhood. Specifically, a lack of communication among neighbors and a lack of unity were cited as indicators of this issue. Negative characteristics of people and neighbors were listed by other respondents as their neighborhood/community’s biggest problem. Examples of these characteristics include racism and intolerance, a lack of diversity, and a lack of friendliness amongst neighbors. Other respondents listed the presence of unsupervised youth and a general dislike of their neighbors. When examined by ZIP code, the percentage of Latinx respondents who mentioned lack of community as a problem was as low as 13% in 49507 and as high as 23% in 49508 and 49509. See Appendix E for a map of these data.

However, other Latinx respondents cited a sense of community as a strength in their neighborhood. Specifically, respondents pointed to the level of communication between community members as a strength, along with a sense of unity among members. One feature of this unity, according to respondents, is the fact that neighbors look out for and take care of one another. Several participants identified the diversity of people within the community and the community’s multiculturalism as their neighborhood/community’s biggest strength. In addition, respondents also mentioned the friendliness of their neighbors and the presence of children. The percentage of Latinx respondents who mentioned a sense of community as a strength was as low as 38% in 49509, and as high as 50% in 49548. See Appendix F for the percentages of Latinx respondents mentioning a sense of community as a strength in select ZIP codes.
Safety

In both 2016 and 2017, Latinx respondents were the least likely of respondents of all racial/ethnic groups, and only half as likely as White respondents, to say they felt “very safe” in their neighborhood/community. The ZIP code with the highest percentage (30%) of Latinx respondents saying they felt “somewhat unsafe” or “very unsafe” was 49503. The ZIP code with the lowest percentage (6%) of Latinx respondents saying they felt unsafe was 49508. See Appendix G for a map of these data.

Within Latinx respondents, there may be a moderate relationship between perceptions of racism and safety. Of those who said that racism is “not at all” a problem in their community, half also said they feel “very safe.” Meanwhile, less than a quarter of Latinx respondents who thought racism was “not really,” “somewhat,” or “very much” a problem, and “undecided” respondents said they feel “very safe” in their community.

There may also be a relationship between respondents’ ratings of their neighborhood and their perception of safety. While more than 60% of Latinx respondents who rated their neighborhood as “excellent” said they felt “very safe,” 25% or fewer of respondents who rated their neighborhood as anything less than "excellent" said they felt “very safe” in their neighborhood.
In addition, Latinx respondents whose household income was near or below 200% of the federal poverty level were twice as likely as those living above that level to say they feel “very unsafe” or “somewhat unsafe” in their neighborhood. In fact, no Latinx respondents with a household income above 200% of the federal poverty level said they felt “very unsafe” in their neighborhood.

Furthermore, statistical modeling showed the odds of rating one’s neighborhood as “Very” or “Somewhat” safe were nearly 70% lower for Latinx respondents than White respondents, even after controlling for the combined influence of religious status, relationship status, age, gender, sexual orientation, and educational attainment.

Latinx participants’ responses about the strengths and problems in their neighborhoods often revolved around feelings of safety. Feeling unsafe was listed by several participants as their neighborhood’s greatest problem, while at the same time, feeling safe was listed by other participants as their neighborhood’s greatest strength. Many respondents reported a feeling of safety and/or security in their community, and lauded the vigilance of their neighbors in an effort to maintain safety. More specifically, respondents highlighted a lack of crime — specifically, a lack of violence or theft — as an important facet of neighborhood/community safety. At the ZIP code level, the highest percentage of respondents mentioning safety as a strength was 10% in 49548. For a map of these data, see Appendix H.

Multiple respondents who named a lack of safety as their neighborhood’s biggest problem identified a lack of vigilance among neighbors as a contributing factor to this problem. More specifically, the presence of crime and violence such as shootings, theft, gang activity, and speeding vehicles were identified as the biggest problems related to safety in participants’ neighborhoods/communities.

Respondents emphasized drug use, too, and the presence of drugs as their neighborhood/community’s biggest problem. Several respondents also answered that the biggest problem in their neighborhood/community is the strong police presence, which contributed to a feeling of fear and insecurity among participants.

Fifty percent or more of Latinx respondents in ZIP codes 49507 and 49503 cited insecurity as a problem in their communities. For a map of these data, see Appendix I.
Poverty, Income, and Wealth

Latinx respondents were the most likely of respondents of all racial/ethnic groups to be near or below the federal poverty level in both years. In 2016, 42% of Latinx respondents were near or below the federal poverty level, and 75% were near or below twice the federal poverty level. From 2016 to 2017, the percentage of respondents within each racial group who were impoverished increased. In 2017, 68% of Latinx respondents were near or below the federal poverty level, and nearly nine out of 10 Latinx respondents were near or below twice the federal poverty level.

Moreover, Latinx respondents were the least likely of all racial/ethnic groups to be making more than $60,000 a year, and most likely to be making less than $30,000 per year. In contrast, White respondents were the most likely to be making more than $60,000 per year, and the least likely to be making less than $30,000 per year. The odds of having an income over $30,000 for Latinx respondents were half those of White respondents after controlling for religious status, relationship status, age, gender, sexual orientation, and educational attainment.

Homeownership, commonly used as a proxy measure for wealth, varied considerably between racial/ethnic groups. While slightly more Latinx respondents were homeowners than African American and Multiracial respondents, they were still far less likely to own a home than White respondents. Fifty-five percent of White respondents said they owned a home, compared to 36% of Latinx respondents, 32% of Multiracial respondents, and 24% of African American respondents. Nevertheless, Latinx respondents were the least likely of any racial/ethnic group to say that they had experienced homelessness.

Latinx respondents were the **least likely** of any racial/ethnic group to say that they had experienced homelessness.
**Proximity to Resources**

Another major theme that emerged among the responses of Latinx survey participants was proximity to resources. Some participants identified proximity to certain establishments and resources as the biggest strength of their neighborhood/community. More specifically, respondents mentioned their neighborhood/community's proximity to schools; the downtown area in general; parks and trails; stores and restaurants; libraries; and public transportation.

Latinx respondents who identified a lack of proximity of their neighborhood/community to certain resources as its biggest problem named the lack of proximity to parks, grocery stores, and the downtown area specifically.

Interestingly, the ZIP code 49508 held both the highest percentage of Latinx respondents saying proximity to resources was a strength and the highest percentage saying it was a problem. This could be due to a difference in which part of the ZIP code the respondents live, or a difference in which resources are important to them. To see the percentage of respondents in select ZIP codes who mentioned proximity to resources as a strength or problem, see Appendix J and Appendix K, respectively.

**Other Neighborhood Strengths and Problems**

In addition to the aforementioned themes, Latinx respondents mentioned several other strengths and problems. These primarily consisted of faith, schools, housing, poverty, noise, and cleanliness.

Several respondents indicated that faith, described by many simply as “God” (or “Dios” when answered in Spanish), was the biggest strength of their neighborhood/community. At least one respondent named the presence of the church in their neighborhood as its biggest strength.

Survey participants noted that the presence of schools, and the quality of the schools themselves, were the biggest strength of their neighborhood/community. Proximity to schools and community support of schools were highlighted as specific school-related strengths.

Latinx respondents who identified housing-related themes as the biggest strength of their neighborhood focused on specific aspects of housing: the presence of historical homes, homes with increasing value, the prevalence of home ownership, and well-kept homes were all described as strengths.

Much like participants who named housing in their neighborhood/community as its biggest strength, several respondents identified certain aspects of the housing within their neighborhoods/communities as their biggest problems. Specifically, houses in disrepair that need attention and high rent rates were named as significant problems related to housing.

A unique theme that emerged among responses was the prevalence of poverty in respondents' neighborhoods/communities. Several participants noted a lack of income as a community-wide issue, while others pointed out the lack of financial help and/or resources for the neighborhood/community.

Many respondents listed the “tranquility” of their community as its biggest strength. Along similar lines, respondents identified the quiet atmosphere, peacefulness, and friendliness of their communities as strengths. Conversely, while some respondents listed the tranquility of their neighborhood/community as its biggest strength, many other respondents noted the high noise level of their community as its biggest problem. Loud neighbors, parties, and music were identified as sources of the high noise level.
Cleanliness of their neighborhood/community was identified by several participants as the biggest strength of their community, while many other respondents identified a lack of cleanliness as their community’s biggest problem. Those who indicated cleanliness was a strength of their neighborhood specifically mentioned the cleanliness of homes, the street, and the neighborhood in general as strengths. Additionally, multiple respondents described how the members of their community work together to keep the neighborhood clean. Those respondents who identified a lack of cleanliness as their neighborhood/community’s biggest problem named litter in the streets and the presence of vermin (such as rodents and insects) as specific problems. Related to cleanliness, multiple participants noted that poor road quality was the biggest problem in their neighborhood. Potholes, roads in need of repair, and inadequate snow and leaf removal were specifically identified as problems.

Several respondents indicated that they did not know or were unsure about the biggest strength or problem in their neighborhood/community. Other respondents indicated that there was no biggest strength or problem in their neighborhood/community.

**CONCLUSIONS**

From educational attainment to safety to feelings of community, the VoiceGR 2016 and VoiceKent 2017 results suggest that Latinx residents’ perceptions and experiences are both unique to their communities and the same as seen in the rest of the community, especially African American and Multiracial populations. Specific racial/ethnic disparities were found — and are likely at least somewhat intertwined — in educational attainment, income and wealth, accessibility of healthy foods, awareness of signs and symptoms of mental health conditions, and safety.

Latinx respondents had the lowest levels of educational attainment of any major racial group. Because educational attainment tends to lead to higher incomes, among other positive outcomes, closing the gap in educational attainment may lead to better outcomes across the board. Latinx respondents also had lower levels of income. This may signify a need for better jobs, access to or information regarding higher paying jobs, higher educational attainment, or other factors that may lead to higher income. Accessibility of healthy foods may also be tied to income. Because the term accessibility was not defined in the survey, accessibility may encompass issues of proximity to stores that sell fruits and vegetables, the cost of produce, as well as other factors that make people feel they do not have access to fresh fruits and vegetables.

Latinx respondents were least likely to say they could recognize signs and symptoms of mental health conditions. This may be a lack of education regarding mental health or its importance, and additional research is needed to find out how this gap of awareness in mental health conditions may be closed.

Latinx residents were also the least likely of any major racial group to feel safe in their neighborhoods/communities. Feelings of safety could be tied to the presence of a number of things in the neighborhood, such as crime, drugs, or police, all of which were mentioned by respondents as problems in their communities.

Across Latinx participants, similar themes emerged as responses to each open-ended question were analyzed. Community, and the people within a community, are an important aspect of neighborhood

---

4 Responses that did not pertain to the survey question, were unable to be deciphered, or were unable to be translated (likely due to spelling errors and lack of researcher knowledge of colloquial language) were categorized into a “Miscellaneous” category. Further analysis of the responses placed in this category is recommended.
quality to Latinx respondents. While some listed a great sense of community and friendly neighbors as their neighborhood/community’s biggest strengths, a lack of community and unfriendly neighbors were listed by others as their neighborhood/community’s biggest problems.

Other themes emerged across responses, including tranquility vs. noisiness, cleanliness vs. lack of cleanliness, proximity to resources vs. distance from resources, feelings of safety and lack of crime/violence vs. feelings of insecurity and presence of crime/violence. These themes represent the most salient aspects of Latinx participants’ neighborhoods/communities, as represented by survey responses. It is reasonable to conclude that these themes represent what is most important to Latinx people as they experience life in their neighborhood/community. Building strong communities with good relationships with neighbors, maintaining a clean and tranquil space, being close to community resources, and feeling safe have all been identified as aspects that make a strong neighborhood/community, with their themes describing neighborhoods/communities with significant problems.

Beyond the aforementioned themes, unique themes such as poor road quality, poverty, schools, and faith emerged. These themes also represent important aspects of neighborhood/community life for Latinx respondents. While strong faith and good schools were listed as community strengths, poor road quality and poverty illuminate areas for possible economic development.

RECOMMENDATIONS

Call to Action

This report suggests that not enough attention is given to the needs of Latinx communities. There is much work to be done to close racial/ethnic disparities in the greater Grand Rapids area and Kent County. Philanthropic dollars could be well spent on improvement of quality of life specifically for Latinx populations. To close the racial/ethnic gaps, greater efforts are needed to ensure access to higher education, higher wages, safer neighborhoods, mental health information, and other resources for Latinx residents throughout Kent County.

Additional Research

Because of the convenience sampling methodology, some populations in Kent County are underrepresented. In subsequent iterations of the VoiceKent survey, researchers recommend a more rigorous sampling methodology, such as stratified or simple random sampling, in order to obtain a more representative sample of the county. Oversampling of Latinx and African American residents is also recommended in order to be able to draw stronger conclusions between specific demographic characteristics, and to be able to understand differences between geographic areas with smaller populations, such as townships, smaller ZIP codes, neighborhoods, and census tracts.

It would also be helpful to compare this research to similar studies in different areas, and the Census 2020 data, when available, to help ensure reproducibility of results, and especially to understand the extent of the effect of the convenience sampling.

Additional qualitative research would be an excellent supplement to this project. While quantitative data is certainly helpful and vitally important for identifying disparities and helping to understand the ecosystem in which we live at a broad level, qualitative data may be able to better address more specific experiences, and may help to capture nuance and more complex questions than quantitative data can measure. One benefit
of qualitative data is an improved ability to explain quantitative results. For example, this project has shown that Latinx respondents are less likely to feel safe in their neighborhoods than other groups, but that does not explain why this is so. In this instance, it would be helpful to analyze the qualitative question on VoiceKent, “What about your neighborhood/community makes you feel unsafe?” Additionally, asking follow-up questions may also provide further useful information. For example, researchers could ask, “Why do you think this is the biggest strength/problem in your neighborhood/community?” or, “If you could change one thing about the biggest problem in your community, how would you change it?” These and other open-ended questions may help further understanding of the needs of the Latinx community in the Greater Grand Rapids area.

Comparing the responses of Latinx participants to the two open-ended questions to the responses of other racial groups would be helpful in future analysis. Doing so would illuminate whether the strengths and problems identified by Latinx participants are unique to that racial/ethnic group, or if other groups share similarly themed responses.

Additionally, participants frequently mentioned drugs as the biggest problem in their neighborhood/community. Learning more about the presence of drugs and their usage in communities would enable greater understanding of the issue. Similarly, asking more questions about the police presence in certain neighborhoods/communities may help explain why such a police presence exists, and its impact on community members.
Percentage of Latinx respondents who can afford to meet their basic needs "very well"

¹ This question tended to have less responses because it was only asked to respondents with children.
Description of logistic regression modeling

Four logistic regression models were created — one for each of four outcomes: income, ratings of safety, and ratings of physical and mental health. Prior to modeling, each of these variables was made into a binary variable. For the three ratings variables, “Excellent and good” were separated from “Fair, poor, and failing.” Income was split into “Less than $30,000” and “$30,000 or more.” To understand the impact of race/ethnicity, six demographic variables were controlled for in the model, including religious status, relationship status, age category, gender, sexual orientation, and educational attainment.

White was used as the reference race/ethnicity, so there were three new binary variables created from the race/ethnicity variable: one for Black/African American, one for Latinx, and one for Multiracial. The table below shows the coefficients for each of these race/ethnicity variables in each model and the p-value associated with that coefficient. These coefficients are log odds ratios. In order to interpret them, they must be transformed and then interpreted as an odds ratio relative to White. For example, the Latinx variable had a coefficient of -0.7233 in the income model. To convert to an odds ratio: $e^{-0.7233} = 0.4851$. Therefore, the odds of a Latinx respondent reporting a household income of $30,000 or more are approximately half that of a White respondent after controlling for religious status, relationship status, age category, gender, sexual orientation, and educational attainment.

* p-value is significant at a significance level of 0.05
** p-value is significant at a significance level of 0.01
Appendix N: Neighborhood strength and problem themes from qualitative analysis

What do you think is the biggest strength of your neighborhood/community?

- Proximity to Resources
  - Schools
- Other Community Resources
  - People: diversity, multiculturalism, friendly people, presence of children
  - Sense of Community: communication, unity, looking out for/taking care of one another
- Overall Neighborhood Experience
  - Tranquility: quiet, peaceful
  - Cleanliness
  - Friendliness
- Safety
  - Feeling of Safety
  - Lack of Crime/Violence
- Other Neighborhood Strengths
  - Faith
  - Schools
  - Housing
  - Tranquility
  - Cleanliness/Friendliness
- Miscellaneous
- Don’t Know/Unsure
- None
- N/A

What do you think is the biggest problem in your neighborhood/community?

- Proximity to Resources
  - Other Resources
• Community
  People: racism, lack of diversity, lack of friendliness, unsupervised youth, dislike of neighbors
  Sense of Community: lack of communication, lack of unity

• Safety
  Strong police presence
  Crime/Violence: shootings, robbery, gang activity, speeding cars
  Lack of Safety
  Drug Use

• Housing
  Houses in Need of Repair
  High Rent

• Poverty
  Lack of Income
  Lack of Financial Help/Resources

• Other Neighborhood Problems
  Noisiness
  Cleanliness: littering, vermin
  Poor Road Quality: potholes, inadequate snow and leaf removal

• Miscellaneous
• Don’t Know/Unsure
• None
• N/A
The survey asks questions about you and your experiences.
It takes about 10 – 15 minutes to complete.
It is up to you if you want to take or not take the survey.
You can skip any questions you do not want to answer.
The survey does not ask for your name.
Your personal information will NOT be shared.
In the spring of 2017, results can be seen on www.VoiceGR.org.
Questions? Please email ShareYourVoice@gvsu.edu or call 616-331-7121.

Thank you for sharing your voice!
What do you think about Grand Rapids?

1. For yourself, what grade would you give the Greater Grand Rapids Area as a place to live overall?  
   Choose only one:
   - O A – Excellent
   - O B – Good
   - O C – Fair
   - O D – Poor
   - O F – Failing

About You

2. Which of the following race categories best describes you? Check all that apply:
   - □ White
   - □ Black/African American
   - □ American Indian/Alaska Native
   - □ Asian
   - □ Native Hawaiian/Other Pacific Islander
   - □ Hispanic/Latino
   - □ Multiracial
   - □ Other (please specify):

3. What is your primary language? Choose only one:
   - O English
   - O Spanish
   - O Arabic
   - O Mandarin
   - O Other (please specify):

4. What other languages do you speak? Check all that apply:
   - □ English
   - □ Spanish
   - □ Arabic
   - □ Mandarin
   - □ Other (please specify):

5. What gender do you identify with? Choose only one:
   - O Male
   - O Female
   - O None of the above (please specify):
   - O Don’t know/not sure

6. How would you describe your sexual orientation? Choose only one:
   - O Heterosexual/straight
   - O Gay/lesbian
   - O Bisexual
   - O None of the above (please specify):
   - O Don’t know/not sure
7. How old are you? *(Enter age in years. For example, 27)*
________________________ years old

8. What is your current relationship status? *Check all that apply:*
- Single
- Committed relationship and not married
- Married
- Widowed
- Divorced
- Separated
- Other (please specify):

9. What is your current religion, faith or belief? *Check all that apply:*
- Agnostic
- Atheist
- Buddhist
- Catholic
- Protestant Christian (for example, Baptist, Reformed, Non-Denominational)
- Jewish
- Hindu
- Muslim
- Spiritual, Non-religious
- None
- Other (please specify):

10. Are you currently a student? Choose *only one:*
- Yes *(Continue to 11)*
- No *(Skip to 12)*

11. If you are a student, which of the following are you working towards? *Choose only one:*
- High school diploma or GED
- Associate degree / Technical Certification
- Bachelor’s degree
- Graduate degree
- Continuing education classes (non-degree)

12. What is the highest level of education you have completed? *Choose only one:*
- Less than or some high school (no diploma)
- High school graduate or GED
- Some college (no degree)
- Associate degree (AA or 2-year college)/Technical certification
- Bachelor’s degree
- Graduate degree or higher

13. Are you currently looking for a paying job? *Choose only one:*
- Yes
- No

14. Do you currently have at least one paying job? *Choose only one:*
- Yes *(Skip to 16)*
- No *(Continue to 15)*

15. If you do not have a paying job, why is that? *Check all that apply:*
- Not applicable *(Continue to 16)*
- Retirement *(Skip to 19)*
- Disability *(Skip to 19)*
- Being laid off *(Skip to 19)*
- Quit previous job *(Skip to 19)*
- Choice (for example, stay-at-home parent) *(Skip to 19)*
- Other (please specify) *(Skip to 19)*:

*Work, Benefits, and Health Insurance*

Continue to next page
16. How many paying jobs do you currently have? (Enter number of jobs)
____________________ job(s)

17. About how many total hours per week do you work at your paying job(s) on average? (Enter total number of hours)
____________________ hour(s)

18. Have you been offered any of the following benefits through any of your paying jobs? This question does NOT include health or medical insurance. Check all that apply:

- Paid vacation (for example, paid time off)
- Paid sick leave
- Paid maternity/paternity leave
- Employer contributions to a retirement plan
- None
- Other (please specify):

19. In the past year, did you receive any of the following government benefits? Check all that apply:

- Childcare Assistance
- Medicaid
- TANF (Temporary Assistance for Needy Families)
- Cash Assistance
- Food Assistance (EBT/Bridge Card or SNAP/Food Stamps)
- State Emergency Relief (for example, utility and water shutoff)
- Social Security
- Medicare
- WIC (Women, Infants, and Children)
- HUD assistance (Department of Housing and Urban Development, like, Section 8 Housing)
- MSHDA assistance (Michigan State Housing Development Authority)
- None
- Other (please specify):

20. In the past year, did you have health insurance? Choose only one:
- Yes, for all of the year (Continue to 21)
- Yes, for part of the year (Continue to 21)
- No, not in the past year (Skip to 23)

21. Did you buy your health insurance through a health insurance marketplace, or exchange? (Also known as, Affordable Care Act, ACA, MiCare, or Obamacare) Choose only one:
- Yes
- No

22. In the past year, what health insurance have you had? Check all that apply:

- Health insurance through your employer
- Health insurance through your spouse or domestic partner
- Health insurance through your parent(s)
- Student health insurance
- Medicaid
- Medicare or Medicare supplement
- Healthy Michigan Plan
- Self-paid health insurance (I pay the premiums myself)
- Veteran’s Administration, TRICARE
- Indian Health Service, Tribal Health Services
- None
- Other (please specify):

If you answered 21 and 22, skip to 24.

23. Why did you not have health insurance?

____________________________________

Continue to next page
Shelter/Housing and Household

24. What is your current housing status right now? Choose only one:
   - Own, no mortgage
   - Own, paying mortgage
   - Rent, including subsidized housing or college housing (contract or lease)
   - Living with someone (friend, relative, etc.) and paying rent without a contract or lease
   - Living with someone (friend, relative, etc.) and not paying rent without a contract or lease
   - Homeless
   - Other (please specify):

25. In the past year, have your utilities been turned off due to lack of payment? Choose only one:
   - Yes
   - No

26. In the past year, have you faced foreclosure or been evicted for non-payment? Choose only one:
   - Yes
   - No

27. Have you experienced homelessness (lived outside in places such as a street, park, abandoned building, car, in an emergency shelter, or in transitional or supportive housing for homeless persons)? Choose only one:
   - Yes, in the past year
   - Yes, more than one year ago
   - No

28. How many adults ages 18 years or older live in your household, including yourself? (Enter number of adults)

29. How many children under 18 years old live in your household? (Enter number of children)

30. Which of the following categories best fits your total household income last year? Choose only one:
   - Less than $5,000
   - $5,000 to less than $10,000
   - $10,000 to less than $15,000
   - $15,000 to less than $20,000
   - $20,000 to less than $25,000
   - $25,000 to less than $30,000
   - $30,000 to less than $35,000
   - $35,000 to less than $40,000
   - $40,000 to less than $45,000
   - $45,000 to less than $50,000
   - $50,000 to less than $60,000
   - $60,000 to less than $70,000
   - $70,000 to less than $80,000
   - $80,000 to less than $90,000
   - $90,000 to less than $100,000
   - $100,000 to less than $120,000
   - $120,000 to less than $140,000
   - $140,000 or more

Your Neighborhood

A neighborhood is made up of where you stay and the small geographic area that surrounds where you stay. For example, Grand Rapids has over 30 neighborhoods.

31. How would you rate your neighborhood as a place to live?

<table>
<thead>
<tr>
<th>A – Excellent</th>
<th>B – Good</th>
<th>C – Fair</th>
<th>D – Poor</th>
<th>F – Failing</th>
</tr>

### Your Health

51. In the past year, how would you rate your physical health? Choose **only one**:

- O A – Excellent
- O B – Good
- O C – Fair
- O D – Poor
- O F – Failing

52. In the past year, how would you rate your mental and emotional health? Choose **only one**:

- O A – Excellent
- O B – Good
- O C – Fair
- O D – Poor
- O F – Failing

53. Do you have one person that you think of as your personal doctor or primary health care provider? Choose **only one**:

- O Yes
- O No

54. Do you use tobacco products (For example, cigarettes, snuff, chewing tobacco, etc.)? Choose **only one**:

- O Every day
- O Some days
- O Not at all

55. Do you use electronic cigarettes (e-cigs) or vaporizer (vape) pens? Choose **only one**:

- O Every day
- O Some days
- O Not at all

56. Over the past seven days, on how many days were you physically active for a total of at least 30 minutes per day? Physical activity is an activity that increases your heart rate and makes you get out of breath some of the time. Choose **only one**:

- O 0 days
- O 1 day
- O 2 days
- O 3 days
- O 4 days
- O 5 days
- O 6 days
- O 7 days

---

<td>O</td>
<td>O</td>
</tr>
<tr>
<td>b. Is it easy to obtain fresh fruits and vegetables within your community or neighborhood</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
</tr>
</tbody>
</table>

63. In the past 6 months, how often did you experience the following:

<table>
<thead>
<tr>
<th>Event</th>
<th>Never</th>
<th>Less than Once Per Month</th>
<th>Monthly</th>
<th>Weekly</th>
<th>Daily</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. I worried whether food would run out before I/we got money to buy more</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>b. The food I bought just didn’t last, and I/we didn’t have money to get more</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>c. Adults in my/our household cut the number of our meals or skipped meals because there wasn’t enough money for food</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>d. I was hungry but didn’t eat because there wasn’t enough money for food</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
<td>O</td>
</tr>
</tbody>
</table>

64. Which of these statements best describes the food eaten in your household in the last 12 months? Choose only one:
   - Enough of the kind of the food we wanted to eat
   - Enough but not always the kind of food we want
   - Sometimes but not enough to eat
   - Often not enough to eat
   - Don’t Know/Can’t Say

Children and Family

72. Overall, do you think Grand Rapids Public Schools are (Choose only one):
   - Getting better
   - Staying the same
   - Getting worse
   - Don’t know

73. Do you have children? Choose only one:
   - Yes (Continue to 74)
   - No (END OF SURVEY)

If you do not have children, you have completed the survey. Thank you for sharing your voice!

74. How many of your children are (Enter number of children):
   - 0-4 years old (Continue to 75)
   - 5-8 years old (Continue to 75)
   - 9-13 years old (Continue to 75)
   - 14-17 years old (Continue to 75)
   - 18+ years old and living in your household (Continue to 75)
   - 18+ years old and NOT living in your household (Continue to 75)
   - None of the above (Skip to END OF SURVEY)

75. Do any of your children currently attend (Check all that apply):
   - Grand Rapids Public Schools (GRPS)
   - Public schools other than GRPS (please specify):
   - Charter schools
   - Private schools
   - Homeschool
   - Other (please specify):
   - None of the above

76. I believe the schools in my community are committed to building each child’s strengths. Choose only one:
   - Strongly Agree
   - Agree
   - Not Sure
   - Disagree
   - Strongly Disagree

77. I believe the teachers in my community’s school excite children about the future. Choose only one:
   - Strongly Agree
   - Agree
   - Not Sure
   - Disagree
   - Strongly Disagree

78. How would you rate the number of choices available when choosing a local school or district? Choose only one:
   - Excellent
   - Good
   - Fair
   - Poor
   - Don’t Know/Can’t Say

Continue to next page
79. Whether or not you have children attending Grand Rapids Public Schools, how would you rate the district overall? Choose only one:

- Excellent
- Good
- Fair
- Poor
- Don’t Know/Cant’ Say

80. Do any children in your household have any of the following physical or mental health conditions? Check all that apply:

- Type I diabetes
- Type II diabetes
- Heart disease
- Depression
- Asthma
- ADD/ADHD
- Lead poisoning
- Anxiety
- No child(ren) living in household
- None
- Other (please specify):

81. Please rate the extent to which you agree or disagree with the following statement:

<table>
<thead>
<tr>
<th>Strongly agree</th>
<th>Agree</th>

My children (under age 18) are able to get enough fruits and vegetables. Choose only one:

- Strongly agree
- Agree
- Not sure
- Disagree
- Strongly disagree

83. (If you have children under 18 living with you) In the last 6 months, did any of the children in your household ever skip meals because there wasn’t enough money for food? Choose only one:

- Daily
- Weekly
- Monthly
- Never
- Does not apply

END OF SURVEY

You have completed the survey. Thank you for sharing your voice!
The survey asks questions about you and your experiences.
It takes about 15 minutes to complete.
It is up to you if you want to take or not take the survey.
You can skip any questions you do not want to answer.
The survey does not ask for your name.
Your personal information will NOT be shared.
In the spring of 2018, results can be seen on www.VoiceKent.org.
Questions? Please email ShareYourVoice@gvsu.edu or call 616-331-7121.

Thank you for sharing your voice!
What do you think about the Greater Grand Rapids Area?

1. For yourself, what grade would you give the Greater Grand Rapids Area as a place to live overall? Choose only one:
   - O A – Excellent
   - O B – Good
   - O C – Fair
   - O D – Poor
   - O F – Failing
   - O Don’t know/Not sure

About You

2. Which of the following race/ethnicity categories best describes you? Check all that apply:
   - □ White
   - □ Black or African American
   - □ American Indian or Alaska Native
   - □ Asian
   - □ Native Hawaiian or Other Pacific Islander
   - □ Hispanic or Latino/a
   - □ Middle Eastern or North African descent
   - □ Multiracial
   - □ Other (please specify):
   __________________________________________

3. What is your primary language? Choose only one:
   - □ English
   - □ Spanish
   - □ Arabic
   - □ Mandarin
   - □ Other (please specify):
   __________________________________________

4. What other language(s) do you speak? Check all that apply:
   - □ None
   - □ English
   - □ Spanish
   - □ Arabic
   - □ Mandarin
   - □ Other (please specify):
   __________________________________________

5. How old are you? (Enter age in years. For example, 27)
   ___________________________ years old

6. What gender do you identify with? Choose only one:
   - □ Male
   - □ Female
   - □ None of the above (please specify):
   __________________________________________
   - □ Don’t know/Not sure

7. How would you describe your sexual orientation? Choose only one:
   - □ Heterosexual/straight
   - □ Gay/lesbian
   - □ Bisexual
   - □ None of the above (please specify):
   __________________________________________
   - □ Don’t know/Not sure

8. What is your current relationship status? Check all that apply:
   - □ Single
   - □ Committed relationship and not married
   - □ Married
   - □ Widowed
   - □ Divorced
   - □ Separated
   - □ Other (please specify):
   __________________________________________

9. What is your current religion, faith, or belief? Check all that apply:
- Agnosticism
- Atheism
- Buddhism
- Catholicism
- Protestant Christianity (for example, Baptist, Reformed, Non-Denominational)
- Hinduism
- Islam
- Judaism
- Spiritualism, Non-religious
- None
- Other (please specify):

10. What is the highest level of education you have completed? Choose only one:
- Less than or some high school (no diploma)
- High school graduate or GED
- Some college (no degree)
- Associate degree (AA or 2-year college)/Technical certification
- Bachelor’s degree
- Graduate degree or higher

11. Are you currently a student? Choose only one:
- Yes
- No

Work, Benefits, and Health Insurance

12. Are you currently looking for a paying job? Choose only one:
- Yes
- No

13. What is your current employment status? Choose only one:
- Employed, full-time
- Employed, part-time
- Not currently working
- Unable to work
- Retired
- Homemaker or stay-at-home parent
- Other (please specify):

14. Have you been offered any of the following benefits through any of your paying jobs? This question does NOT include health or medical insurance. Check all that apply:
- Paid vacation (for example, paid time off)
- Paid sick leave
- Paid maternity/paternity leave
- Employer contributions to a retirement plan
- None
- Other (please specify):

15. In the past year, did you receive any of the following government benefits? Check all that apply:
- Childcare Assistance
- TANF (Temporary Assistance for Needy Families)
- Cash Assistance
- Food Assistance (EBT/Bridge Card or SNAP/Food Stamps)
- State Emergency Relief (for example, utility and water shutoff)
- Social Security
- WIC (Women, Infants, and Children)
- HUD assistance (Department of Housing and Urban Development, Section 8 Housing)
- MSHDA assistance (Michigan State Housing Development Authority)
- I do not receive any government benefits
- Other (please specify):

16. In the past year, did you have health insurance? Choose only one:
- Yes, for all of the year (Continue to 17)
- Yes, for part of the year (Continue to 17)
- No, not in the past year (Skip to 18)

Continue to next page
17. In the past year, what health insurance have you had? **Check all that apply:**

- Health insurance through the Marketplace or exchange (Affordable Care Act, ACA, MiCare, Obamacare)
- Health insurance through your employer
- Health insurance through your spouse or domestic partner
- Health insurance through your parent(s)
- Student health insurance
- Medicaid
- Medicare or Medicare supplement
- Healthy Michigan Plan
- Self-paid health insurance (I pay the premiums myself)
- Veteran's Administration, TRICARE
- Indian Health Service, Tribal Health Services
- I did not have health insurance
- Other (please specify): ________________________________

**If you answered question 17, skip to question 19.**

18. What are some reasons why you did not have health insurance?

____________________________________
____________________________________
____________________________________
____________________________________

19. What is your housing status right now? **Choose only one:**

- Own, no mortgage
- Own, paying mortgage
- Rent, including subsidized housing or college housing (contract or lease)
- Living with someone (friend, relative, etc.) and **not** paying rent
- Homeless (**skip to 27**)  
- Other (please specify): ______________________

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
21. How often do you, family, or visitors smoke inside your home? Choose only one:

- O Daily
- O Weekly
- O Monthly
- O A few times
- O Never

22. Does your home or the place where you live have a private septic system or is it connected to the city system? Choose only one:

- O Private septic system (continue to 23)
- O City system (skip to 24)
- O Don’t know/Not sure (skip to 24)

23. How old is your septic system? Choose only one:

- O Less than 10 years old
- O 10 – 19 years old
- O 20 – 29 years old
- O 30 years old or older
- O Don’t know/Not sure

24. When you drink water at home, where does the water come from? Check all that apply:

- O Private water well
- O The city
- O The store
- O Other (please specify):
  ___________________________________________________________________
- O Don’t know/Not sure

25. When was the last time your drinking water was tested? Choose only one:

- O 1 year ago or less
- O Between 1 – 3 years ago
- O More than 3 years ago
- O I have never had my water tested
- O Don’t know/Not sure

26. Have you experienced homelessness (lived outside in places such as a street, park, abandoned building, car, in an emergency shelter, or in transitional or supportive housing for homeless persons)? Choose only one:

- O Yes, in the past year
- O Yes, more than one year ago
- O No

27. In the past year, have your utilities been turned off due to lack of payment? Choose only one:

- O Yes
- O No

28. In the past year, have you faced foreclosure or been evicted for non-payment? Choose only one:

- O Yes
- O No

29. Which of the following categories best fits your total household income last year, before taxes? Choose only one:

- O Less than $5,000
- O $5,000 to less than $10,000
- O $10,000 to less than $15,000
- O $15,000 to less than $20,000
- O $20,000 to less than $25,000
- O $25,000 to less than $30,000
- O $30,000 to less than $35,000
- O $35,000 to less than $40,000
- O $40,000 to less than $45,000
- O $45,000 to less than $50,000
- O $50,000 to less than $60,000
- O $60,000 to less than $70,000
- O $70,000 to less than $80,000
- O $80,000 to less than $90,000
- O $90,000 to less than $100,000
- O $100,000 to less than $120,000
- O $120,000 to less than $140,000
- O $140,000 or more
